

AUTOMATION TESTING

Client

Our client is a Canada-based, foremost prominent provider of online workflow solutions in diverse fields like risk management, medical, legal counselling, and modern sciences and solutions. The main motive of the client is to unchain the doubts of the learners and practitioners and prepare them to make better decisions at a hard time.

Solution

To help the client with 100% automation. We predominantly achieve in identifying the issues much quicker using OS combination and execute all the test scripts in different browsers using browser stack utility.

Business Challenge

Our client understood the need to automate the critical scenarios for regression testing to track the uninterrupted test results. The client wanted a bug tracking tool; that integrates with an automation tool that will update the bugs regularly. For the failed instances in open case

Industry Utility and service

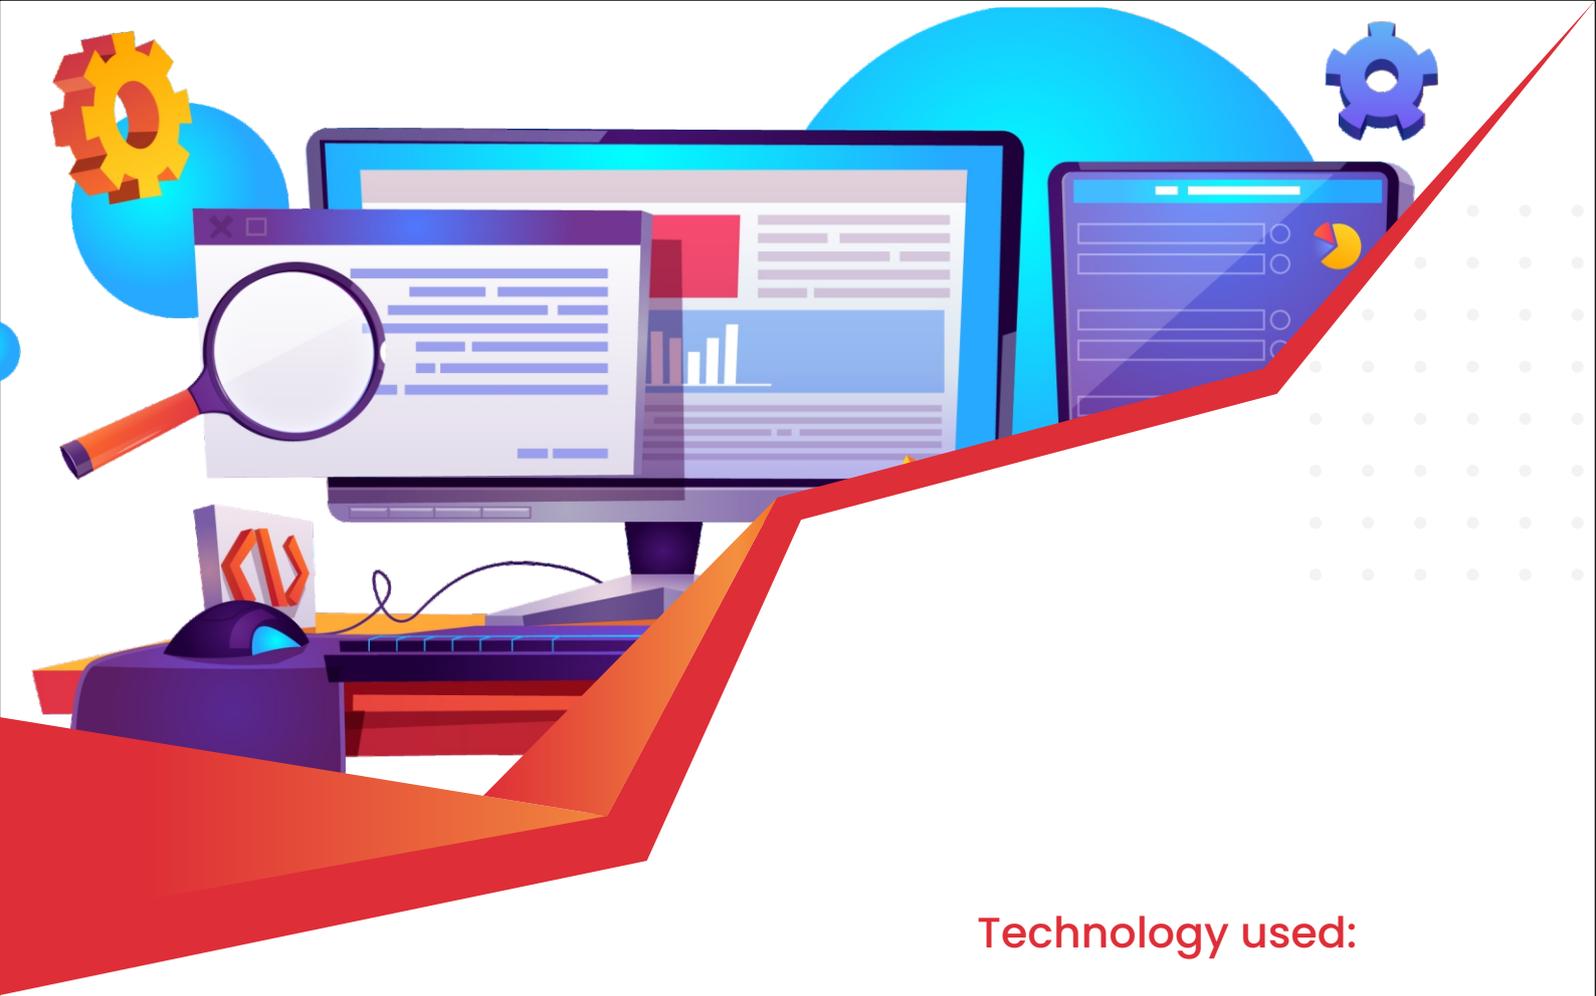

Our client understood the need to automate the critical scenarios for regression testing to track the uninterrupted test results. The client wanted a bug tracking tool; that integrates with an automation tool that will update the bugs regularly. For the failed instances in open case

Solution Delivered

Our experts had some suggestive ideas, and added browser combinations using Selenium Web driver. For the core application, our G2 wizards had suggested different Operating Systems that will help in automation of the test cases for users as well as the admin portal.

These implementations reassured the client with some ideas. As they shared it with us, we expanded the scope for all the major functionality using test automation. Since G2 dealt with major functionalities, the user creation. Enrolling online courses, purchasing courses on the website, using access code, users to purchase the books and adding courses in favorite list for later enrolment, etc.

However, to apply test automation it requires to cover all the major functionalities that form a part of the admin portal like fulfilling the adoption request, creating promotions, access code for items will be created by admins, majorly; helps in maintaining the items, etc.

Technology used:

Selenium Webdriver,

SQLite,

MS Excel,

Android SDK,

XCode

Key Features:

-  100% test automation coverage
-  The major functionality of user and admin portal
-  Parallel execution on multiple machines
-  Bug tracking tool
-  Tracking tool
-  Continues integration tool
