

# MANPOWER MANAGEMENT SYSTEM

## Industry

Manpower consultancy

## Client

The client is a leading Manpower consultancy renowned in California US. They exhibit high-quality service to the IT companies and industrial sectors and provide exceptional services with the finest specialists and expand the business.

## Business Challenge

To solve the critical scenario of organizing the system we created a secured job portal, the workforce can register directly for the services they're interested in. The main challenge is to create a user-friendly structure to estimate the cost using an estimation tool. Since it is a tough grind to maintain the workforce, schedule tasks, and manage their working hours, G2 made it hassle-free in this web application.

## Solution Delivered

The client is looking to expand the business with more clientele on his side. After analyzing their business needs, we helped him in building a web application. Through this, the client can gather lead leads and contact them accordingly. This helps the client to convert them as his prospects for his business. G2 dealt with it by integrating the system that generates a lead based on the user's requirements using the cost estimation tool that helps to gather the information provided by the user. Assists the user to determine the price according to the needs of the services. After all the approvals, the system converts the lead as the prospect/client. Also, we helped them in major functionalities where the client can manage and schedule the job in the web application directly. The application is genuinely satisfying for our client ultimately helps to manage and generate leads without any hindrance.
